FOR IMMEDIATE RELEASE

Oasis- Local Company Launches Internet Continuity Product

MILWAUKEE, WI (July 24, 2003)

As a business-to-business Internet Solutions Provider, Onlight, llc is constantly improving the real-world performance of businesses Internet experiences. Due to customer demand, Onlight created the Oasis system that intelligently manages two or more Internet connections so businesses stay connected to the Internet at all times.

“Today, enterprises require more than just Internet connectivity. Increased reliance upon Internet applications - large and small - means employee productivity and customer satisfaction now depend on continuous, ready access to all the Internet services their daily routines require,” says Tim Chase, Oasis Developer and Chief Engineer at Onlight, llc.

“The modern enterprise demands Internet Continuity. Oasis addresses this demand by providing businesses a new level of Internet Connection portability, or multi-homing. “

For businesses without multiple Internet connections, Oasis provides an opportunity to achieve a level of reliability previously available to only the most sophisticated and well funded IT departments. For those businesses already introduced to this demanding environment, Oasis provides a more effective and flexible solution than traditional multi-homing protocols like BGP with extremely reduced cost and complexity.

More

With Oasis, enterprises of any size can share and load balance bandwidth from different providers and different technologies. Customers are able to mix and match connections - a DSL connection with a T1 connection or a DSL connection and Cable Modem connection and independently add, change and remove Internet connections with ease.

“On larger projects, Onlight has provided us with realistic, cost effective and forward thinking solutions. Oasis is a shining example of this. It is the product for Internet Continuity and load balancing. Onlight is by far the best vendor I've worked with, ” exclaimed Kurt Nass, IT Manager for Shorewest Realtors in Brookfield, WI and early Oasis user.

Having sold their successful high-speed Internet connectivity service, alpha dot net, entrepreneurs Karl Vollbrecht and Tim Chase, founded Onlight, llc in 2001. Corporate offices are located at 757 N. Water Street, Milwaukee, WI.
